VsRocq

A year in review - And
what's to come

Romain Tetley

**“Real Theorem Provers
Deserve Real User
Interfaces”**

“Real Theorem Provers Deserve Real User Interfaces”

Théry, Bertot, Kahn (1992)

What do we want from a “real” IDE ?

From a user's perspective

- Easy to set-up
- Easy to use
- Guide new users

From a developer's perspective

- Easily maintainable
- Compatible with multiple tools, do the work once

01

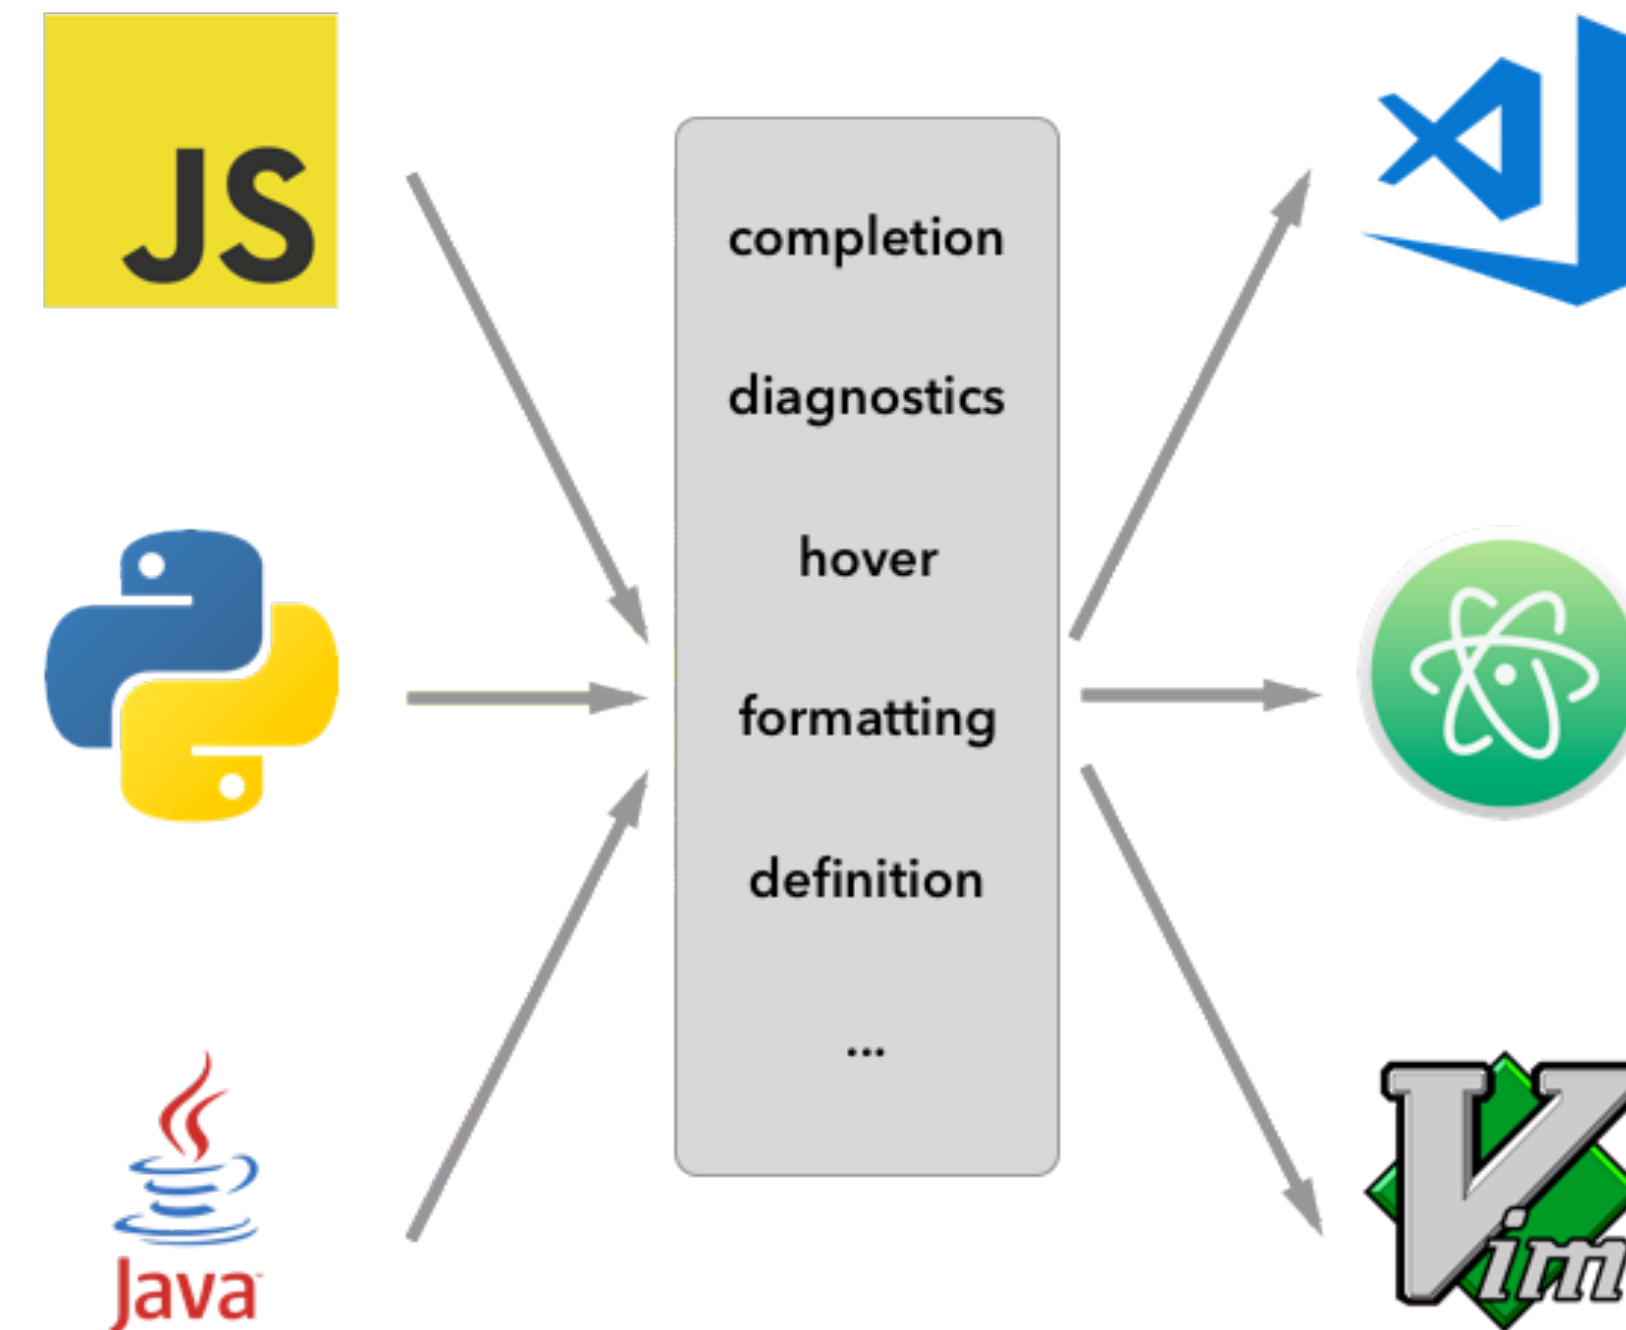

Language Server Protocol

What is LSP ?

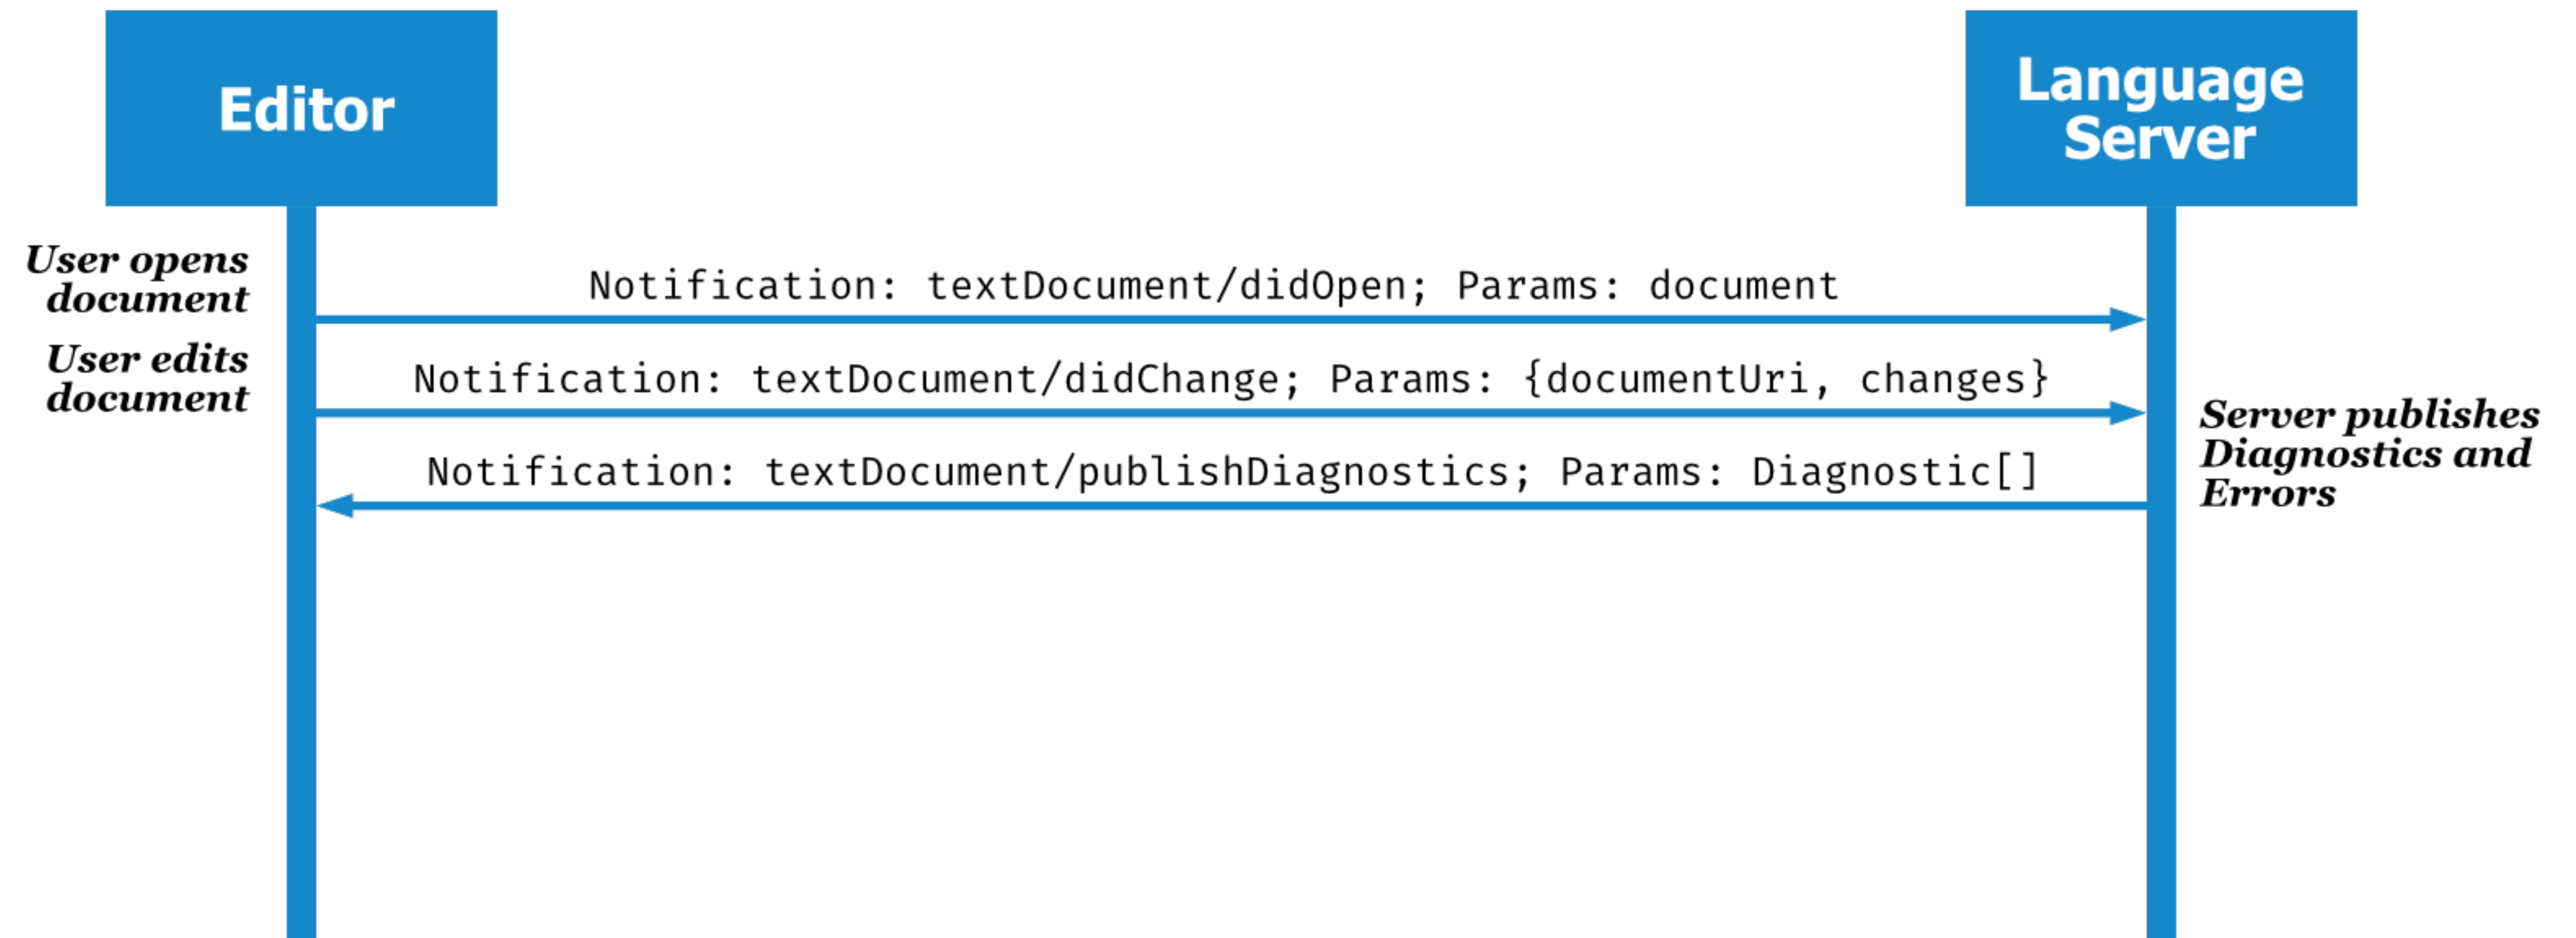

NO LSP

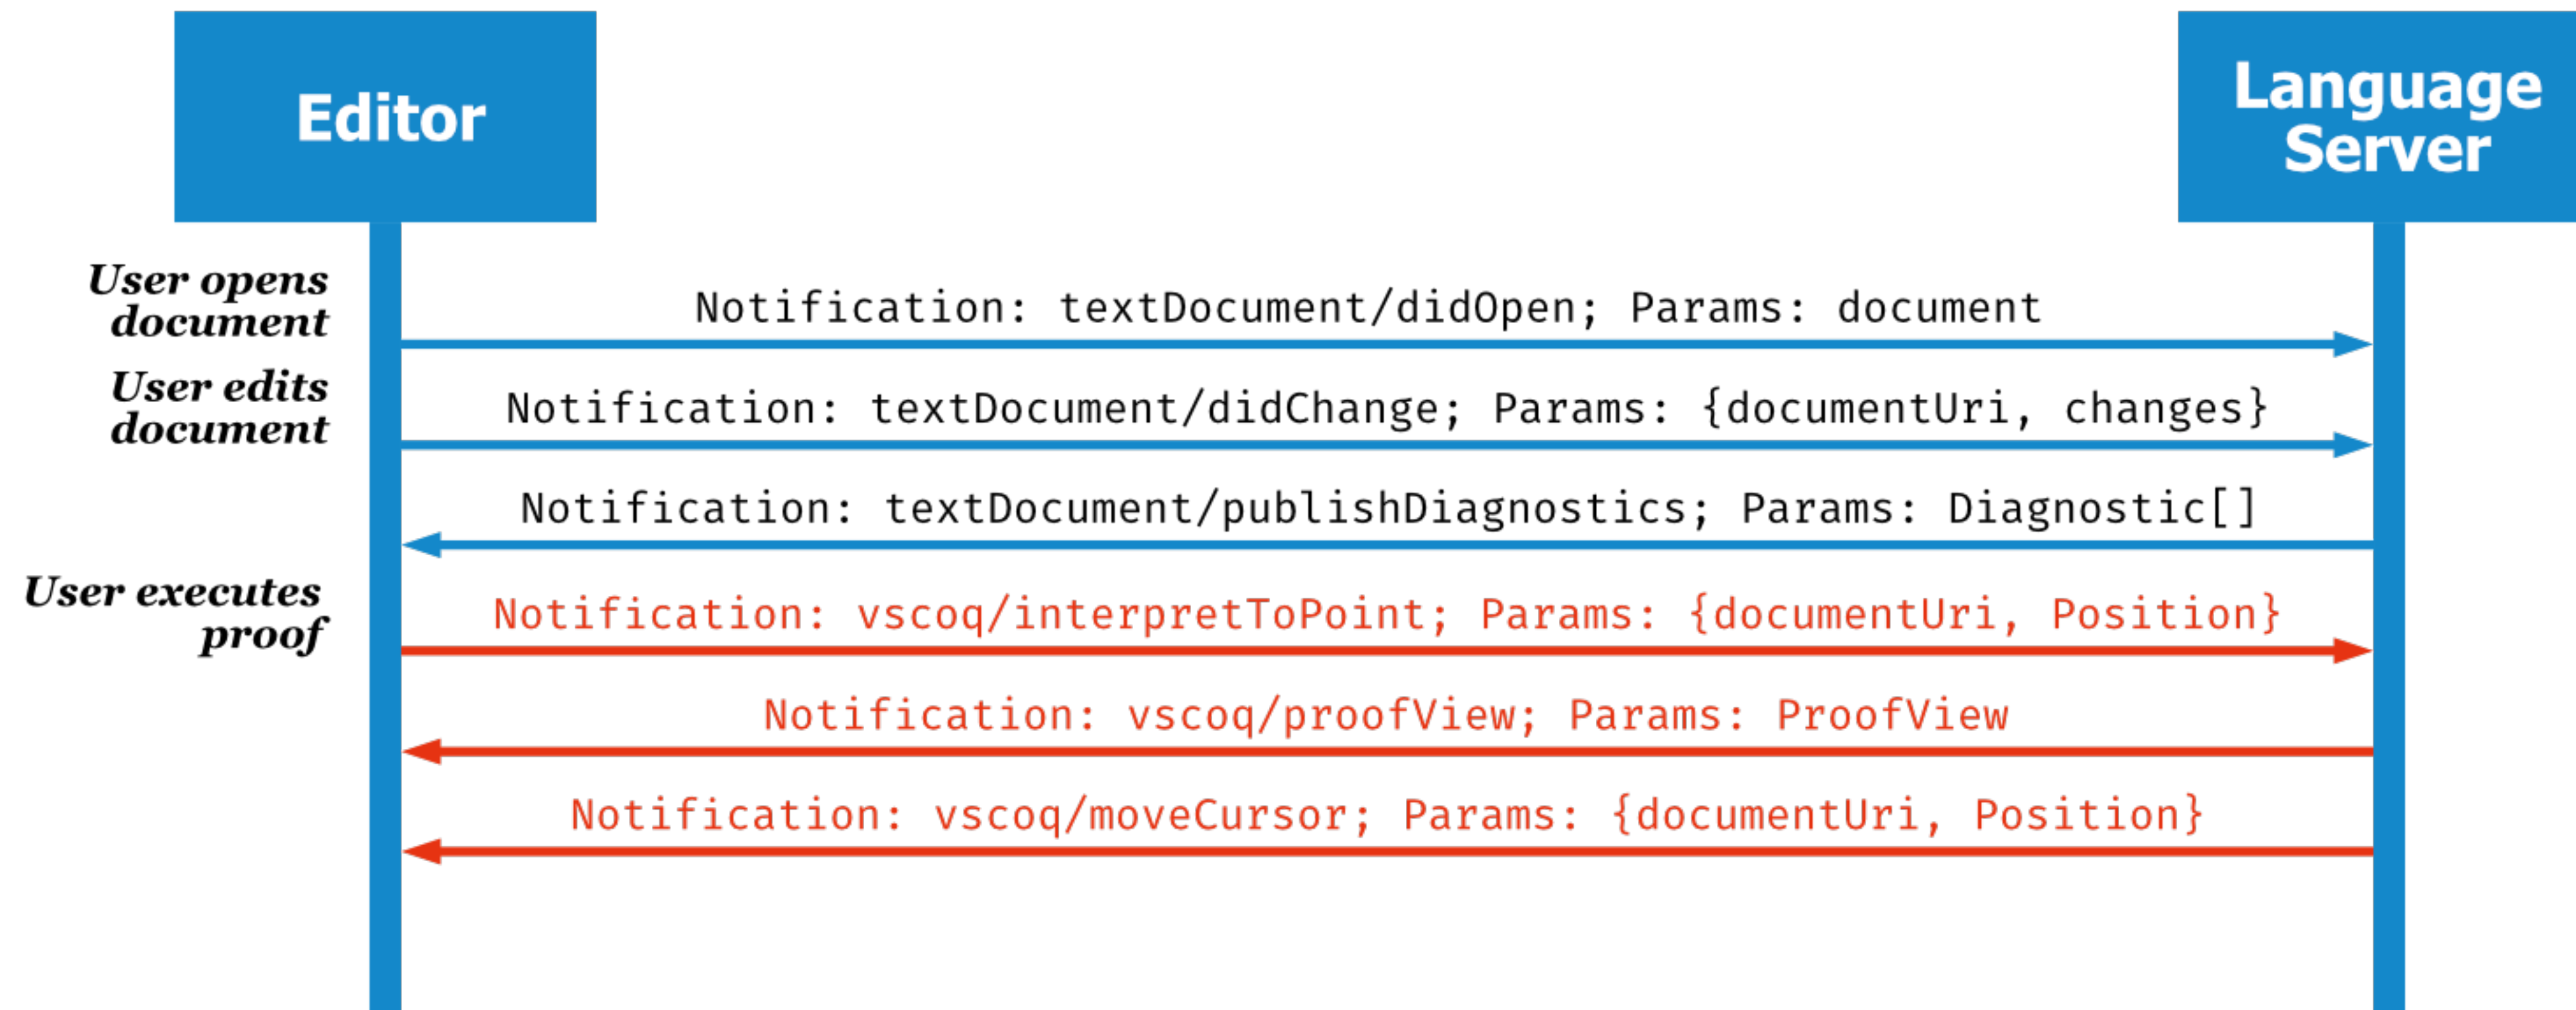

LSP

LSP Protocol

Adapting LSP for Coq

02

VsRocq

VsRocq

vsrocq-language-server

- Written in ocaml
- Reactive programming pattern

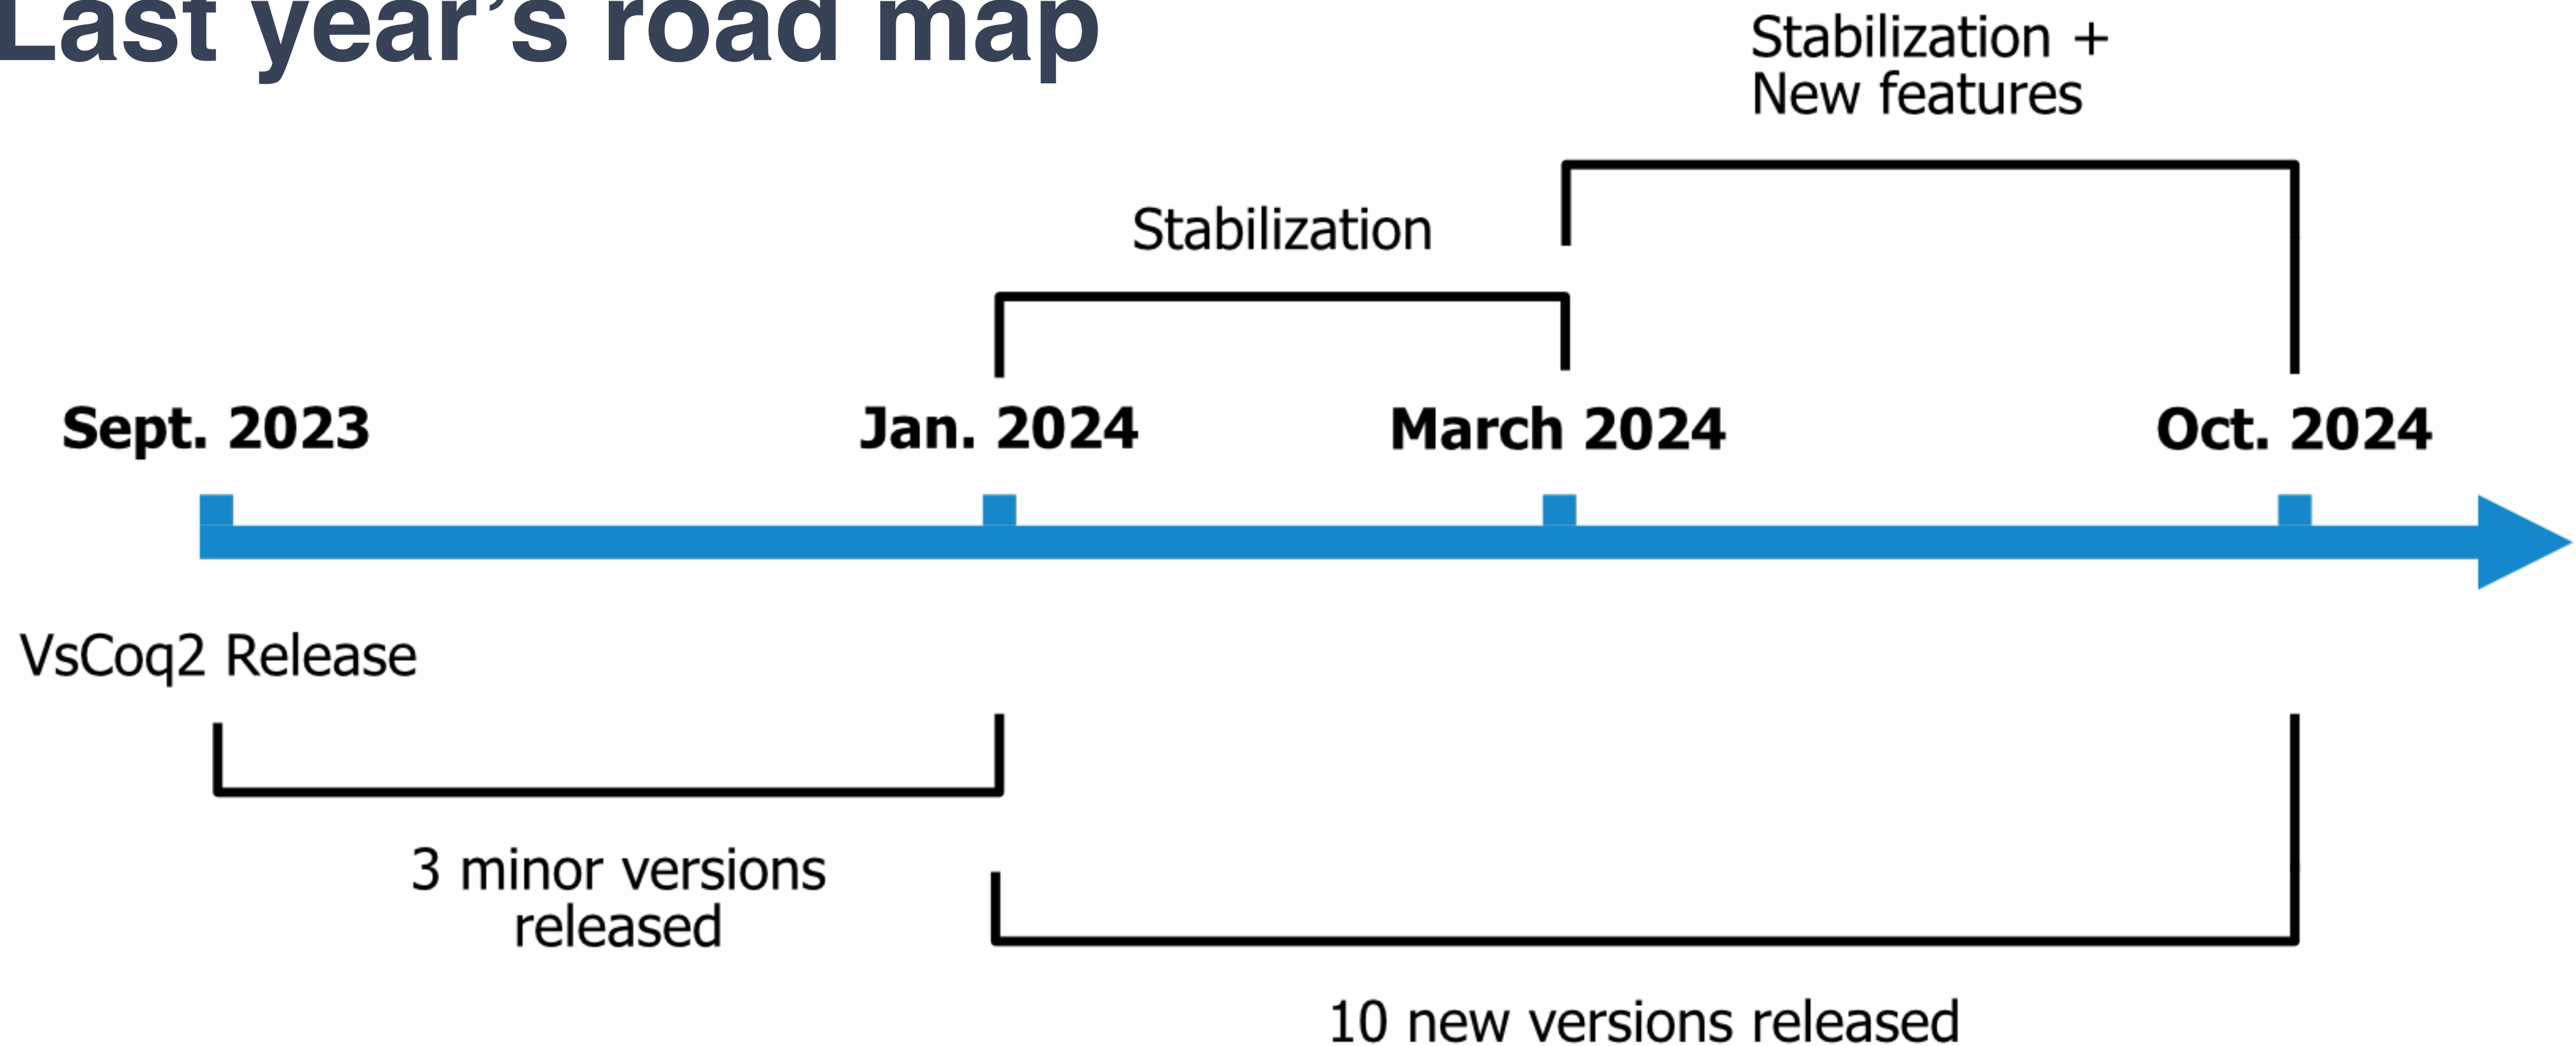

Client

- Written in typescript, using React
- Two independent web-apps: the goal view and the query panel
- Pretty printing library in react to format goals (based on Oppen's algorithm)
- Re-usable, dynamic, interactive

Last year's road map

Last year's road map

Some factoids about last year

- Focus on stability / VsRcoq Legacy parity
- About 70-80% done
- We can focus on new features

Some statistics (from March 2025)

- Downloaded 34 253 times till date
- 2435 times in the last three months

What about this year ?

Full road map available on GitHub

- <https://github.com/coq/vscoq/wiki/The-VsCoq-VsRocq-roadmap-2024-2025>
- Many different themes

Themes focusing specifically on education

- More interactivity (for non expert users as well)
- New ways to query the system
- Onboarding: one click install, better access to doc, ...

Collaborations

- Make it as easy as possible to build on top of VsRocq

Collaborations in practice

Providing an API for external extensions

- Get information on the current proofs
- Get the state after executing commands

Use cases

- A companion extension for a university level logic course in the Netherlands:

<https://github.com/logic-and-applications/rocq-lna>

- An AI powered IDE: Coq-Pilot (Rocq-pilot ?)

03

A word on rocq-platform

The Rocq Platform

- **A distribution of Rocq along with a selection of libraries and plugins**
- **Provide a distribution for developing and teaching Rocq that is:**
 - OS independent
 - Dependable
 - Easy to install
 - Comprehensive

The Rocq Platform - This year

- Latest release: Rocq 8.19
- We now have a release cycle ~ 6 months after Rocq release
- Work on signing / notarising process, particularly on MacOS

The Rocq Platform - Next year

- ~~Full time position open for an engineer managing the platform~~
- A new engineer is joining the team (for 3 years) in April to manage the platform
- Industrialise the release process: proper CI/CD pipeline
- Work on process for adding new packages and governing board

04

Work on Rocq -
Food for thought

Make Rocq easier to interface and distribute

- We are limited by Rocq in terms of features (ex: quick fix, jump to definition, etc...)
- Re-thinking compilation and file formats (the platform .dmg is barely below 1Gb)
- Sometimes Rocq does not stick to its specs, for example:
 - Not clear where messages are sent : debug auto sends to Info, debug eauto sends to Debug
 - Pretty printing specs are not always respected : a line break should be inserted before the symbols of a notation

Work in Rocq

- Documentation overhaul, doc strings
- A global query system
- Structuring the internal state
- Adding namespaces
- Separate globalisation from the interp phase

Thank you !
